

HUMMINGBIRD NECTAR RECIPE

- Boil four cups of water.
- Remove water from the heat.
- Stir in one cup of white sugar.
- Cool the syrup before filling feeder.
- Do not use honey, which can cause a fatal fungal infection on the birds' tongues.
- Do not add food coloring to the solution. It's not necessary, and it may be harmful. Even a small spot of red on the feeder will attract hummingbirds.
- You can store the extra nectar in the refrigerator for a week.
- Place the feeder where you can see it from a window.

Clean the feeder at least once a week. In warm weather, you may need to change the syrup and wash out the feeder every day.

Don't let the nectar turn cloudy in the feeder — that's mold. It will make hummingbirds avoid your feeder, and it may make them sick.
